Hello Alan,

I hope you are well. I just wanted to circle back with you on this. Please let me know if there's a particular time that would work better for you to have a brief call tomorrow or Friday, but I did also want to provide my question in a written format so you have it in advance. To answer your question on what this is needed for/where this request came from, this is an audit procedure we perform to essentially reconcile between capital outlay expenditures and capital additions, although we don't need to explain every dollar. This helps verify that additions are accurate. I am fine with what you've sent over, the only question/concern I had is that I believe you've backed into that maintaince/repair and items under the threshold number by calculating the difference between additions and outlay—but if there was a true variance it would avoid detection when calculated that way. We certainly don't want you to have to look through invoices one-by-one, but with the background information on what we are trying to achieve, are there alternative ways to reconcile the difference between the two numbers (outlay and additions)? For example, if we were to simply extract GL entries under the capitalization threshold would that get us most of the way there, or would we not be looking at things at the right level of precision? Or is there anything else that comes to mind that would still be efficient? As I said, I wanted to share this in writing so you had the information, but I'm happy to jump on a call at your convenience.

The second question I had is that we want to make sure we are looking at the most recent version of the report as we review. Obviously as you noted below you'll need to make updates as part of this entry, but just wanted to confirm versions so that we aren't reviewing any out-of-date information. The most recent version on Suralink of the excel is dated 1-6-25—other than the change noted below, is this version up-to-date or have there been any changes made since then? Similarly for the word document, it looks like the most recent version on Suralink is dated 8-29-2024—is this the most recent version of this, or were any changes made to this in the process of revising the excel?

Thank you,

Aaron Calderon

Subject: EXT: Fixed Assets

I have uploaded a file to item 85. If this looks good and you can take care of your testing from this, I will post the necessary entries and update the financial statements. If not I need someone to hop on a call with me to discuss this, I have asked I think a half dozen times for a meeting on what this request is actually needed for. If you are looking for a specific breakout on maint. vs non-capital procurement, I would need to know if there is any concept on how Les gathered that. The workpaper that he provided in the past does not provide any detail on how this was collected, and at this stage the only thing I can think to do to provide that breakout would be to run through invoices for several hundred line items. The amounts for the 41M have been reconciled against the expenditures, but the numbers have changed a bit since I found some adjustments that had to be made.

Again, please let me know if the workpaper I provided will be sufficient, if not, send me a meeting invite so I can discuss, please do not reply with an email. I can make anytime after 10:00 tomorrow work, and am available all next week.

All other request Items have been replied to. Please let me know if you have any follow up. If you need to reach me, I will be home tomorrow, but available. My number is below:

I've added a file called "Line Item Breakout" that provides tab by tab each line item for the reconciliation. On the expense tabs, there are generally notes or indications on why the items were excluded from capitalization.

Hello Alan,

Thank you—that is exactly what we needed! We'll get this documented. One of our standard audit procedures involves picking a couple lines from that reconciliation and testing—please see below for our selections, would you be able to provide the underlying invoices or other applicable support for these when you have a chance?

1	33	0000	4500	000	8999	733	20	33 0000 4500 000 8999 733	Amazon	GJ	9/20/2022	SE FURNITURE	94,678.00	Multiple items under threshold	Expense
2	33	0000	4700	000	8999	450	20	33 0000 4700 000 8999 450		CD	8/16/2022	Cisco EA ON-PREMISES	56,364.00	Lifecycle Tech - non CIP	Expense
3	36	0118	4700	000	8755	450	20	36 0118 4700 000 8755 450		CD	8/2/2022	West 2nd Floor Restroom	28,395.00	Lifcycle - plumbing	Expense

Please let me know if you'd still like to have a call, but otherwise the document you uploaded answers my questions, and regarding your point about closing out fixed assets the procedures above are really the last items we have open. I'm still happy to jump on a call if you'd like though!

Regarding the report, I completely understand your point about fixed assets. Do you have a rough sense on when an updated version of the report (whatever applicable changes are pending currently on the excel/word) would be available? We don't need you to rush and provide that immediately—just asking so we can plan ahead. Even though we are still working through our documentation, we would like to start getting that through our formal review process in the coming weeks.

Thanks again,

Aaron Calderon

I've added a file called "Line Item Breakout" that provides tab by tab each line item for the reconciliation. On the expense tabs, there are generally notes or indications on why the items were excluded from capitalization.

Please let me know if there's a particular time that would work better for you to have a brief call tomorrow or Friday, but I did also want to provide my question in a written format so you have it in advance. To answer your question on what this is needed for/where this request came from, this is an audit procedure we perform to essentially reconcile between capital outlay expenditures and capital additions, although we don't need to explain every dollar. This helps verify that additions are accurate. I am fine with what you've sent over, the only question/concern I had is that I believe you've backed into that maintaince/repair and items under the threshold number by calculating the difference between additions and outlay—but if there was a true variance it would avoid detection when calculated that way. We certainly don't want you to have to look through invoices one-by-one, but with the background information on what we are trying to achieve, are there alternative ways to reconcile the difference between the two numbers (outlay and additions)? For example, if we were to simply extract GL entries under the capitalization threshold would that get us most of the way there, or would we not be looking at things at the right level of precision? Or is there anything else that comes to mind that would still be efficient? As I said, I wanted to share this in writing so you had the information, but I'm happy to jump on a call at your convenience.
>
> The second question I had is that we want to make sure we are looking at the most recent version of the report as we review. Obviously as you noted below you'll need to make updates as part of this entry, but just wanted to confirm versions so that we aren't reviewing any out-of-date information. The most recent version on Suralink of the excel is dated 1-6-25—other than the change noted below, is this version up-to-date or have there been any changes made since then? Similarly for the word document, it looks like the most recent version on Suralink is dated 8-29-2024—is this the most recent version of this, or were any changes made to this in the process of revising the excel?

Subject: EXT: Fixed Assets

I have uploaded a file to item 85. If this looks good and you can take care of your testing from this, I will post the necessary entries and update the financial statements. If not I need someone to hop on a call with me to discuss this, I have asked I think a half dozen times for a meeting on what this request is actually needed for. If you are looking for a specific breakout on maint. vs non-capital procurement, I would need to know if there is any concept on how Les gathered that. The workpaper that he provided in the past does not provide any detail on how this was collected, and at this stage the only thing I can think to do to provide that breakout would be to run through invoices for several hundred line items. The amounts for the 41M have been reconciled against the expenditures, but the numbers have changed a bit since I found some adjustments that had to be made.

Again, please let me know if the workpaper I provided will be sufficient, if not, send me a meeting invite so I can discuss, please do not reply with an email. I can make anytime after 10:00 tomorrow work, and am available all next week.

All other request Items have been replied to. Please let me know if you have any follow up. If you need to reach me, I will be home tomorrow, but available. My number is below:

Hello Alan,

Thank you—that is exactly what we needed! We'll get this documented. One of our standard audit procedures involves picking a couple lines from that reconciliation and testing—please see below for our selections, would you be able to provide the underlying invoices or other applicable support for these when you have a chance?

1	33	0000	4500	000	8999	733	20	33 0000 4500 000 8999 733	Amazon	GJ	9/20/2022	SE FURNITURE	94,678.00	Multiple items under threshold	Expense
2	33	0000	4700	000	8999	450	20	33 0000 4700 000		CD	8/16/2022	Cisco EA ON-PREMISES	56,364.00	Lifecycle Tech - non CIP	Expense

								8999 450							
3	36	0118	4700	000	8755	450	20	36 0118 4700 000 8755 450		CD	8/2/2022	West 2nd Floor Restroom	28,395.00	Lifcycle - plumbing	Expense

Please let me know if you'd still like to have a call, but otherwise the document you uploaded answers my questions, and regarding your point about closing out fixed assets the procedures above are really the last items we have open. I'm still happy to jump on a call if you'd like though!

Regarding the report, I completely understand your point about fixed assets. Do you have a rough sense on when an updated version of the report (whatever applicable changes are pending currently on the excel/word) would be available? We don't need you to rush and provide that immediately—just asking so we can plan ahead. Even though we are still working through our documentation, we would like to start getting that through our formal review process in the coming weeks.

Thanks again,

Aaron Calderon
